

## **International Symposium and Workshop on Infectious and Tropical Diseases 2008**

### **Theme**

Early Detection and Prompt Management of Infectious and Tropical Disease to Decrease Mortality

### **Goal**

Increasing Collaborative Research Enhancing Intellectual and International Publications

### **Background**

The Medical School of the Diponegoro University and Dr. Kariadi Hospital in Semarang, Indonesia has a long history of collaborative work on training, education and research with the Radboud University Hospital, Nijmegen and the Slotervaart Hospital, Amsterdam, The Netherlands. Over the last two decades this has resulted in several Ph.D.'s on infectious diseases which were obtained at the Royal University of Nijmegen. During the first international symposium and workshop on infectious and tropical diseases to be held in Semarang, Indonesia, highlights of the work on Dengue virus infections will be presented, supplemented with presentations on the neglected infection Leptospirosis and on one of the most important and devastating infectious diseases of this century: HIV/AIDS. We hope that this symposium will have an interesting program for all attendees, that enthusiastic researchers from both sides will be present and that it will improve the quality of health services provided by Indonesian medical doctors.
